

POWER-SPRAYS

CONCENTRIC SPRAY GUN FOR GRC

The Power-Sprays' Concentric Spray Head is the ultimate spray gun for efficient spray application of Glass fibre Reinforced Concrete (GRC/GFRC).

Both cement/ sand slurry and glass fibre are projected from the same nozzle which not only ensures good material distribution but the tight spray pattern also minimises wastage. Unlike other GRC spray guns, the Power-Sprays Concentric ensures that fibre and slurry are mixed at the nozzle without the need to rely on the skill of the operator.

The glass fibre roving is cut to length within the rear chopper mechanism. Compressed air propels the chopped fibres through the atomiser body nozzle. Simultaneously, slurry is conveyed to the nozzle from the pump and is emitted from an annulus surrounding the fibre. Compressed air, supplied direct from the nozzle, atomises the slurry and the two materials are projected as a composite.

The Concentric Spray Head is designed to operate in conjunction with all Power-Sprays' GRC spray machines.
